FEATURES

- The eyepiece section of the optical tube incorporates a vernier protractor. Angle measurement is performed easily by turning the protractor to align the cross-hair reticle with the workpiece image.
- Complete selection of interchangeable reticles.
- Both transmitted and reflected illumination intensity can be adjusted to obtain optimal illumination intensity for the workpiece.
- Two XY stages with different travel ranges, 2"x2" (50mmx50mm) and 4"x2" (100mmx50mm), are available.
- The TM-505/510 can output XY coordinate data with optional Digimatic Micrometer Heads. Highly efficient two-dimensional data processing is available by connecting the Digimatic Micrometer Heads to an SPC tool.
